5 600 city disposal cites

12000 eurocontainers

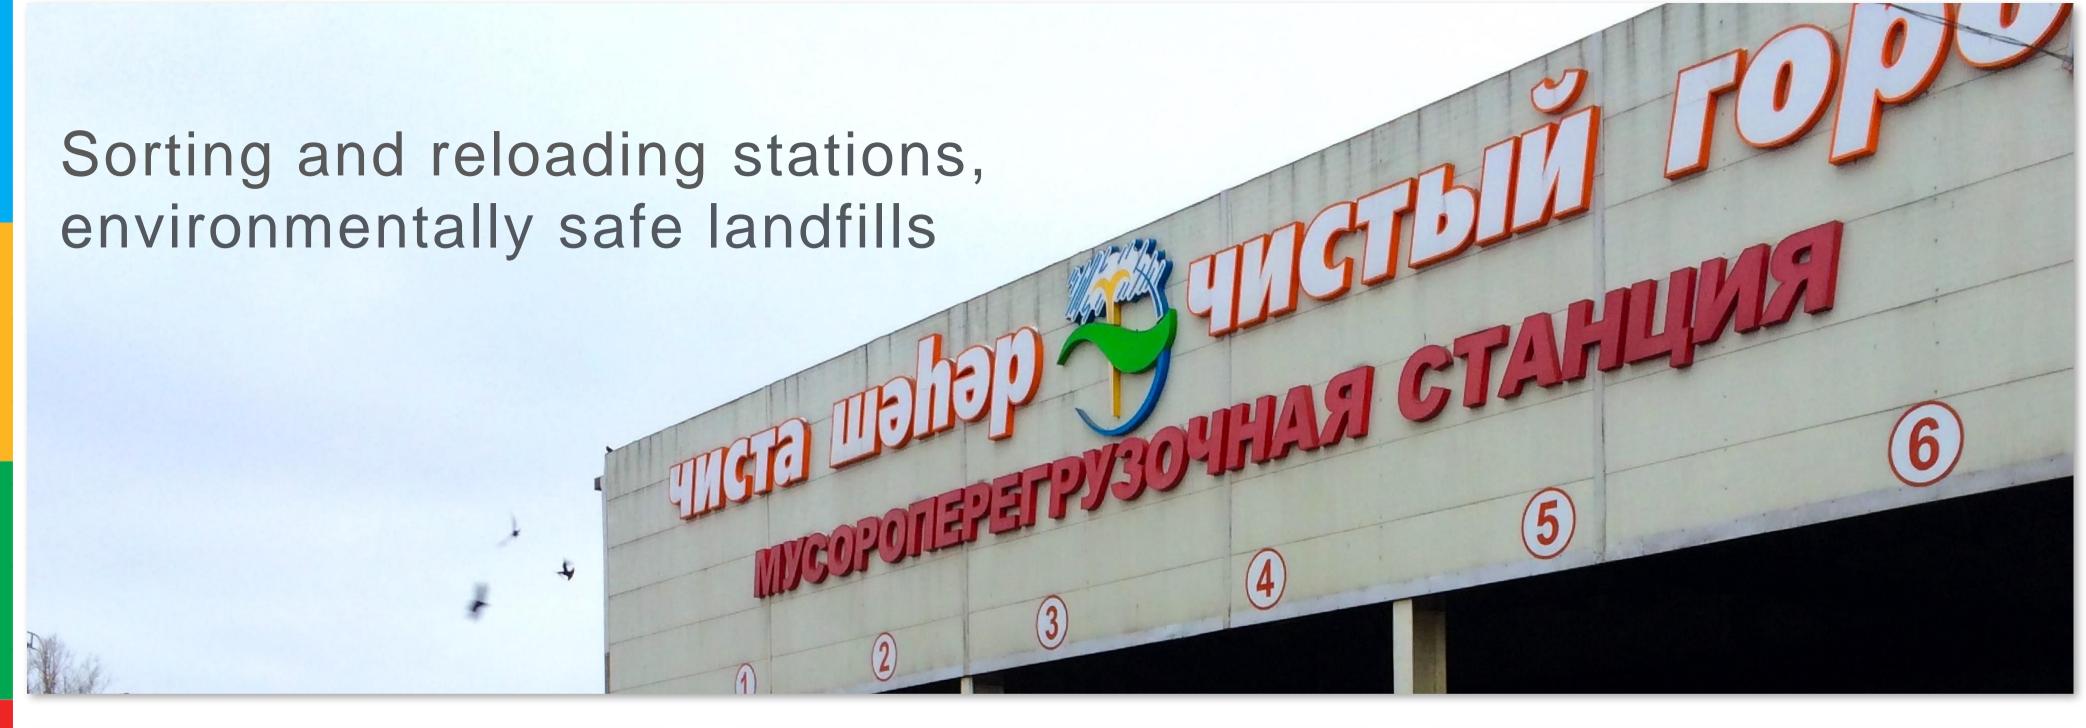

81 New modern garbage trucks

1500
PET Bottle Recycling
Bins

Kazan became a pilot city for several modern solid waste management projects in Russian Federation. The strategy of the city of Kazan 2030 confirms the city's commitment to a "zero waste" philosophy that implies no trash to be sent to landfills in the near future. The main objective of the project that is implemented in Kazan is the termination of the landfilling practices, the use of secondary raw materials, the reduction of the environmental stress and the improvement of the citizens' quality of life.

Thank you for attention!
