

Bordeaux, France: presentation & key figures

Location

Département : Gironde,
Region: Nouvelle Aquitaine,

Demography

- 6th French city (urban area)
- Demographic dynamism,
- Population growth : 5,3% between 2011 and 2016

-256 045 inhabitants (2019)

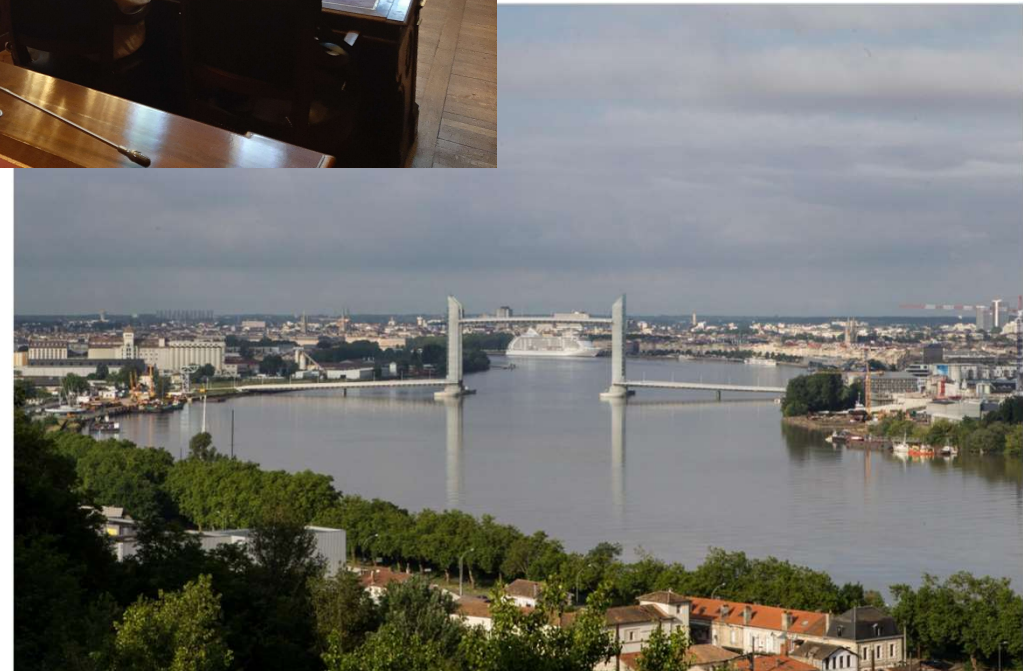

Bordeaux Métropole: 796 273 inhabitants

Area

Bordeaux : 49,36 km²

Bordeaux Métropole : 578,22 km²

New political majority with environmentalists since July 2020

The sensitive climate PB : innovation aspects and current challenges

Shared diagnosis:

- Flood
- Drought
- Bad weather
- Food self-sufficiency (24h)
- Mineral city

Participatory budgeting (2019)

- Theme: sustainable development
- Investment budget : EUR 2.5 million

Results : mains projects and data

407 submitted projects,

134 submitted projects to vote,

13 300 votes (5 % of participation)

41 winners projects to realize by July 2021

Lessons from the comparative study. When reading the report, what are the aspects that have particularly affected you and that you think are important? [3 or 4 key ideas]

- **AWARENESS:** participatory budgetisation for climate : «huge awareness potential»
- **CREATE A COMMON :** despite the diversity of PB formats and territories, the comparative study allows the creation of a global common. This common data reverses the trend of an increasingly globalized world and less globalist world.
- **HIGHLIGHT THE HETEROGENEITY?** A typology emerges inside the sustainable development PB (ex: 'Physical' or tangible' CC adaptation projects • 'Physical' or 'tangible' CC mitigation projects • Combined CC adaptation & mitigation projects • Awareness raising and training on climate change • Early warning projects • Climate change studies and information systems)
- **A GOOD SCALE?** The municipality scale seems to be essential to build projects and make citizen participate around them. However political changes in municipalities weaken participatory budgeting (ex: San Pedro in Mexico or Agueda in Portugal)
