

New Taipei – A Livable and Thriving City

The Participatory Budgeting for Energy Saving Projects

Alan Wei
Research, Development and Evaluation Commission
New Taipei City Government

New Taipei City

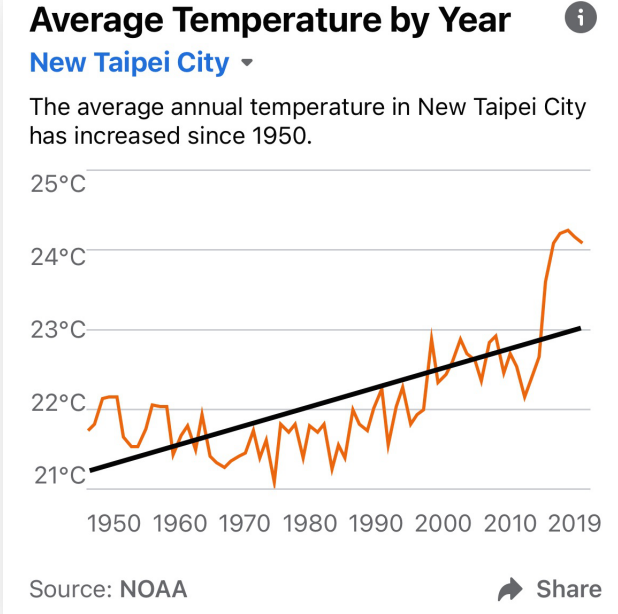

- With various landscape from urban area to seashore and mountain.
- With an urban size 8 times larger than Taipei City
- Decarburization goal: reduce 30% GHGs in 2030
- Population reached **4 million** on 27 April 2019

Banqiao District

Pingxi District

- Rising temperature, change of raining season, heavy rainfall are expected due to climate change

- A process of policy advocacy
- From policy takers to policy shapers
- Bring in the wisdom from the public
- Transform the relationship between the public and policies

Luzhou

Population:
200 thousand

Project year:
2015 - 2016

Jonghe

Population:
220 thousand

Project year:
2016 - 2017

A democracy experiment among the grassroots
A discussion of energy management paradigm

Luzhou

Participation from the
community

Jonghe

Participation from the
commercial service sector

Year 1 - Advocacy & Preparation

Year 2 - Implementation

\$4800

Transforming the vendors to a hub

\$6000

Combining biking with the promotion

\$6000

Training sessions

\$4000

Energy saving picnics

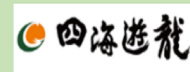

\$5300

Energy saving tips

Key inspiration from other cases

1. Metz

To expand the depth from advocacy to systematic changes

2. Molina de Segura & Russia

To improve the structural design to address different types of issue

3. Lisbon

To link resources to mitigation solutions and actions
